

DUNETH WIDANAPATHIRANA

COMPUTER NETWORKING UNDERGRADUATE | ASPIRING NETWORK & SECURITY ANALYST

dunethinduwara@gmail.com | portfolio: duneth.me

PROFESSIONAL SUMMARY

Highly motivated Computer Networking undergraduate seeking an internship in network infrastructure or cybersecurity. Hands-on experience designing secure, segmented corporate networks in simulated environments and developing NetDevOps Python scripts for configuration management. Currently preparing for CCNA and CompTIA Security+ certifications to build a strong foundation in enterprise routing, switching, and Zero-Trust architecture. Eager to bring technical troubleshooting, automation skills, and a fast-learning mindset to a professional IT or Security Operations team.

TECHNICAL SKILLS

- **Networking Foundations:** Cisco Routing & Switching, VLANs / Inter-VLAN Routing, TCP/IP, OSPF, DHCP, DNS, NAT/PAT.
- **Cybersecurity:** Access Control Lists (ACLs), Zero-Trust Micro-segmentation, DMZ Implementation, Wireshark, Device Hardening (SSHv2, RSA).
- **Automation & Scripting:** Python, Netmiko, Bash, Java, C++, JavaScript.
- **Tools & Platforms:** Cisco Packet Tracer, Linux / Command Line, Git/GitHub.

TECHNICAL PROJECTS

- Secure Enterprise Headquarters Architecture | Cisco Packet Tracer, Python, Zero-Trust
 - Designed a secure, segmented corporate network topology featuring Zero-Trust micro-segmentation to strictly isolate guest wireless traffic from internal IT and HR departments.
 - Configured strict inbound Extended ACLs on the WAN interface to mitigate external IP spoofing while implementing a public-facing DMZ using Static NAT.
 - Integrated a custom Python (Netmiko) script to securely pull and archive running configurations via SSHv2, demonstrating foundational NetDevOps capabilities.
- Automated Network Configuration Backup System | Python, Netmiko, Cisco IOS
 - Developed a network automation tool using Python to autonomously back up device configurations without manual CLI intervention.
 - Engineered secure SSH connections to multiple simulated network devices to automatically execute, extract, and locally archive timestamped running-config files.
 - Demonstrated the ability to scale network management using code rather than traditional manual administration.
- Global Museum Network Infrastructure | Cisco Packet Tracer, OSPF, VLANs
 - Designed and simulated a multi-branch enterprise network architecture to support distributed physical locations.
 - Implemented OSPF routing protocols and highly scalable VLAN segmentation to ensure secure, efficient, and resilient cross-branch communication.
 - Applied foundational network design principles to optimize data flow and minimize broadcast domains.

EDUCATION

BSc (Hons) in Computer Networking (Reading)

University of Bedfordshire (via SLIIT City Uni) | Sri Lanka

Expected Graduation: 2027

- Core Coursework: Routing & Switching, Network Security, Data Communication.

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) – In Progress
- CompTIA Security+ – In Progress

ADDITIONAL INFORMATION

- **Languages:** English (Professional Working Proficiency), Sinhalese (Native)
- **Technical Interests:** Network Architecture, Cybersecurity, Cloud Networking
