

W.P.D.I (DUNETH) SANDARUWAN

Colombo, Sri Lanka | dunethinduware@gmail.com | Portfolio: duneth.me

PROFESSIONAL SUMMARY

Highly motivated Computer Networking undergraduate seeking an internship or entry-level role dedicated to Network Infrastructure, Security Operations, or Network Automation. Specializes in designing secure, segmented enterprise architectures and developing Python (Netmiko) scripts for configuration management. Currently pursuing CCNA and CompTIA Security+ certifications to solidify a strong foundation in enterprise routing, switching, and Zero-Trust architecture. Eager to bring technical troubleshooting, network automation skills, and a strict focus on IT infrastructure to a professional enterprise environment.

EDUCATION

BSc (Hons) in Computer Networking

Expected Graduation: 2027

University of Bedfordshire (via SLIIT City Uni) | Colombo, Sri Lanka

- Core Coursework: Routing & Switching, Network Security, Data Communication, Network Architecture.

TECHNICAL SKILLS

Networking:	Cisco Routing & Switching, OSPF, VLANs / Inter-VLAN Routing, TCP/IP, DHCP, DNS, NAT/PAT.
Cybersecurity:	Access Control Lists (ACLs), Zero-Trust Micro-segmentation, DMZ Implementation, Device Hardening (SSHv2), Wireshark.
Automation & Tools:	Python, Netmiko, Bash, Linux / CLI, Git/GitHub, Cisco Packet Tracer.

TECHNICAL PROJECTS

Secure Enterprise Headquarters Architecture

Cisco Packet Tracer, Python, Zero-Trust

- Designed a secure, segmented corporate network topology utilizing Zero-Trust micro-segmentation to strictly isolate guest wireless traffic from internal IT and HR departments.
- Configured strict inbound Extended ACLs on the WAN interface to mitigate external IP spoofing and implemented a public-facing DMZ using Static NAT.
- Integrated a custom Python (Netmiko) script to securely pull and archive running configurations via SSHv2, demonstrating network automation capabilities.

Automated Network Configuration Backup System

Python, Netmiko, Cisco IOS

- Developed a network automation tool using Python to autonomously back up device configurations across multiple nodes without manual CLI intervention.
- Engineered secure SSH connections to simulated network devices to automatically execute, extract, and locally archive timestamped running-config files.
- Demonstrated modern network management practices by scaling device administration through infrastructure-as-code principles.

Global Museum Network Infrastructure

Cisco Packet Tracer, OSPF, VLANs

- Architected a multi-branch enterprise network design to support distributed physical locations with redundant pathways.
- Implemented OSPF routing protocols and scalable VLAN segmentation to ensure secure, efficient, and resilient cross-branch communication.

LEADERSHIP & EXTRACURRICULARS

Event Branding & Technical Coordinator

March - April 2026

SLIIT City Uni

- Managed digital branding, multimedia, and coordination for major university events including "SCU SWARA 2.0" and "Unplugged Friday", demonstrating strong organizational and cross-team communication skills.

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) - In Progress
- CompTIA Security+ - In Progress
